SUMMARY

Full-stack software developer with 4+ years building and shipping production web applications in C#/.NET Core, Angular and TypeScript. Currently builds customer-facing motor insurance quotation and purchase flows for an insurtech platform — premium calculation logic, insurer and partner integrations, payments, and white-label partner sites — deployed on GCP. Has shipped AI features in production (AI-powered OCR in the internal CRM). Trusted as project Point of Contact between clients, QA and PMs. B.CS. Software Engineering, IIUM (CGPA 3.73).

EXPERIENCE

PolicyStreet — Full Stack Software Developer

October 2024 – Present · Insurtech platform · Kuala Lumpur

- **Built and maintain the customer-facing motor insurance quotation microsite** (.NET Core + Angular) — quotation, add-on selection, payment and policy issuance flows, in English and Bahasa Malaysia, across web and mobile.
- **Implemented insurer premium calculation logic** for motor and motorcycle products — base premium, add-ons and windscreen rates — keeping quotes consistent with each insurer's rating rules.
- **Delivered white-label partner sites for affiliate channels** (automotive marketplaces, e-hailing and logistics partners) — partner configs, branding, partner-specific bundles and eligibility rules such as product-type restrictions.
- **Shipped AI-powered OCR in the in-house CRM** to extract data from uploaded documents, alongside **SignalR real-time updates**, bulk data operations, an EV road-tax calculator and **SQL Server query optimisations**.
- **Point of Contact (PIC) for key projects**, coordinating clients, QA and project managers through delivery, and owning root-cause analysis and fixes for production support cases.

Tricor Roots Consulting — Full Stack Software Developer

September 2022 – September 2024

- **Delivered client features end-to-end from Functional Specification Documents**, translating complex business requirements into .NET Core and Angular solutions.
- **Owned bug resolution through SIT and UAT**, working closely with QA to meet quality and compliance requirements before production releases.
- **Acted as PIC for multiple projects**, triaging urgent tickets with project managers and QA to keep delivery timelines on track.
- Handled **SIT and UAT environment deployments** and post-deployment verification; took part in Agile ceremonies (stand-ups, sprint planning).

InfinitiLab — Software Engineer Intern

March 2022 – August 2022

- Contributed to full-stack development of a client-facing system using **.NET, Angular and Entity Framework Core** in an Agile team.
- Worked through pull-request reviews and JIRA-based sprint workflows, building habits for clean, maintainable code.

SKILLS

Languages C# · TypeScript · JavaScript · SQL · Python · Java
Frontend Angular · RxJS · HTML/CSS · responsive and mobile web
Backend .NET Core · ASP.NET · Entity Framework Core · FastAPI · REST APIs · SignalR
AI Claude API (document citations, prompt caching) · AI-powered OCR · prompt engineering
Data & Cloud SQL Server · GCP (Cloud Scheduler, Cloud Storage)
Tools & Practices Git · Bitbucket Pipelines · JIRA · Agile/Scrum · SIT/UAT

SIDE PROJECTS

- **Policy Q&A** — AI assistant that answers questions about a motor insurance policy PDF and cites the exact clause and page for each answer. Angular · Python · FastAPI · Claude API. github.com/nabihahhh/policy-qa
- **Virtual Street Walk** — Immersive “Drive and Listen”-style experience for strolling city streets virtually. JavaScript. nabihahhh.github.io/virtual-street-walk

EDUCATION

Bachelor of Computer Science (Hons), Software Engineering, International Islamic University Malaysia — 2018–2022 · CGPA 3.73

Foundation Programme, International Islamic University Malaysia — 2017–2018
